

# Easys

easys.

## Easys – take things easy

Easys is another step forward in kitchen design and user comfort. Gentle pressure anywhere on the front panel opens the drawer automatically – smoothly and softly.

## Easys – easy on the eyes, easy on the ears

There's no trade-off with Easys. There are no hidden handles to accommodate. And there's no need to sacrifice soft closing with Silent System, a must-have feature in high-end kitchens. Easys is activated by a very short stroke. This keeps gap dimensions to a minimum and the functionality of a sealing lip is not affected in any way.

## Easys – an easy sell

Easys wins customers over; but extra production effort is minimal. Easys tucks into a small gap behind the drawer back panel. There's no loss of storage space and it's not normally necessary to modify the cabinets. All drawer components stay the same. All this makes Easys eminently suitable for optional product marketing, for instance, in selected applications like pullouts with waste separation system.
