

InnoTech Atira

Double-walled drawer system

Hettich

Every day, every place

The InnoTech Atira drawer system is a globally popular double-walled drawer that is the cost-efficient and practical choice for any project.

The classic, square, side-and-rail drawer sides can be paired with a comprehensive range of interior organisation and is suitable for both indoor and outdoor applications.

Perfected movement
Built to move on the Quadro runner with both full and partial extension options, the smooth sliding has been refined to perfection over 30 years.

Effortlessly handleless
The convenient Push to open Silent function opens the drawer in response to a light press while closing it again in a gently controlled action.

Indoor and outdoor
The Atira platform is compatible with two different drawer runners with equiavlently smooth movement - one for indoor cabinetry and one for outside.

- Opening system combined with Silent System
- System permits minimum drawer front gap of 2.5 mm
- For optimum performance and activation, we recommend fitting an optional synchronisation function
- With the flexible adapter, synchronisation is also possible on curved or angled front panels
- 3-dimensional front panel adjustment for the drawer, 4-dimensional for the pot-and-pan drawer
- A system that stores pushing energy helps to slow down closing action
- Drawers can still be pulled open / guided closed
- Tool-less assembly
- Suitable for all nominal drawer lengths and cabinet body widths of 275 mm and over

Push to open Silent opening system for InnoTech Atira

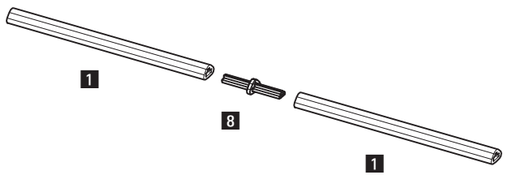

- For optimum performance and activation, we recommend fitting an optional synchronisation function

Set comprises:
- 1 Push to open Silent unit, left and right
- 1 activator, left and right
- 2 adapters for synchronisation

Installing side stabiliser

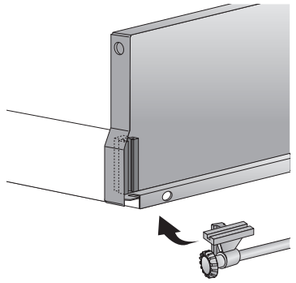

Quality that meets all the demands

The quality of the drawer systems is monitored continuously. Hettich fittings comply with the national and international quality standards of the markets our customers operate in. The diagrams below show some of the tests Hettich fittings are required to pass.

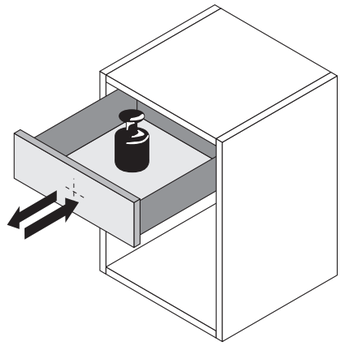

Application
Hettich drawer systems are suitable for use in living room, kitchen, bathroom and office furniture both in the home and business environment.

Load capacity and pull-out guard
The load capacity (to DIN EN 15338) stated in the catalogue is understood to mean the weight of the drawer itself including front panel and contents in kg. The applicable level is shown on the product. Load capacity relates to a reference length of 500 mm. The load capacity may vary for other nominal lengths. All Hettich drawer systems feature guards to prevent the drawer from rolling out and being removed unintentionally and meet the requirements of the impact test in a test frame to EN 15338. Fitted in the proper manner, the drawer systems are suitable for furniture defined in EN 14749. The maximum front panel height is governed in particular by material, drawer size and drawer runner. Testing is conducted on drawers with a 130 mm front panel height and pot-and-pan drawers with a 300 mm front panel height. We will be pleased to provide any further information you may require.

Corrosion test
Hettich runner systems satisfy the requirements on corrosion defined in EN 15338, 72-hour condensation water test to EN 6270.

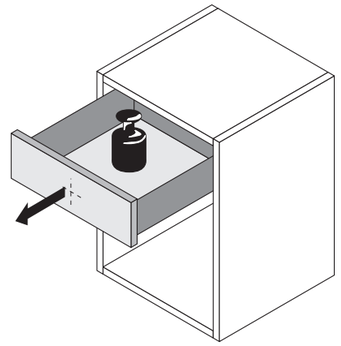

Wear test

The fully laden drawer must remain in proper working order after a defined number of opening and closing operations at a defined test velocity.

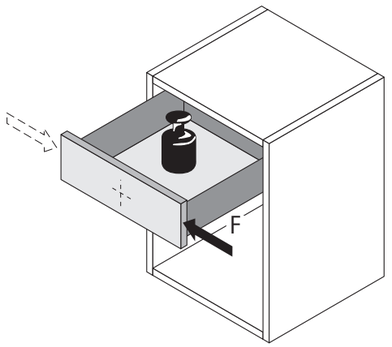

Retention-on-opening test

The fully laden drawer is abruptly opened all the way several times at a defined test velocity.

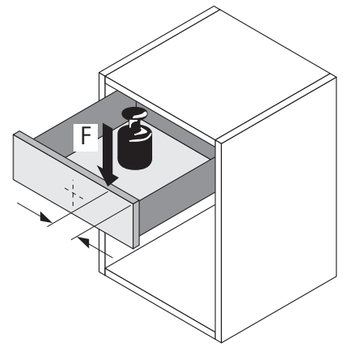

Horizontal load test

Opened all the way, the fully laden drawer is additionally exposed to horizontal strain with a defined lateral force.

Vertical strain test

Opened all the way, the drawer is additionally exposed to vertical strain with a defined eccentric force.

General technical conditions
The fitting information, screw fixing points and load capacity information contained in this document assume proper attachment using screws specified by Hettich to a chipboard panel providing a screw pull out resistance of at least 1,000 N in accordance with EN 320.

Hettich accepts no responsibility for the load capacity of furniture and its components if materials or fastening methods are used other than those stated; the furniture manufacturer must verify load capacity.

The fitting situations show in this catalogue are only intended to illustrate the possible options. The furniture manufacturer is responsible for ensuring that furniture is designed in compliance with standards, in particular with regard to meeting the requirements on safety.

We will be pleased to provide any further information you may require.

General Terms of Sale and Delivery
All products and services will be provided exclusively on the basis of our General Terms of Sale and Delivery published on our website at www.hettich-agb.com.
