

Webinar: “Build furniture efficiently”

Hettich fitting data integration with SWOOD Hardware Installer

Hettich and SWOOD by EFICAD, as part of their strategic partnership, provide a user-friendly tool that allows SWOOD users to access and update all Hettich products within their libraries and schedule fittings at any time.

Hettich products database is now available within SWOOD libraries with the new "Hardware Installer". This makes setting up a hardware library by hand redundant. Not only leaving SWOOD users on the cutting edge of Hettich's latest innovative product lineup, the tool also lets them use every element of data in their 3D woodworking and furniture modelling work. The product ranges available are: AvanTech YOU, InnoTech, Intermat, ArciTech, Sensys and more to come.

In our free webinar “Build furniture efficiently: with HETTICH fitting data integration in SWOOD Hardware Installer.” on July 29th at 3.30 PM we want to show you how easy you can use the SWOOD Hardware Installer to schedule fittings as ready-made SWOODBoxes. Register now:
